Humanitarian Assistance Module

Cooperation Management Platform

The main function of the Ministry of Foreign Affairs and International Cooperation of Honduras during a crisis is the international humanitarian assistance's management (preparation, socialization and operation), which also entitles to provide up to date information to our external service representations and to the international community.

In this regard, after an eventual evaluation reveals that the effects of an event exceeds the national response capacity to attend the people affected and to repair the damage caused by the phenomenon a Declaration of Disaster and / or national calamity is carried

Cooperation Management Platform

In this sense, in an emergency situation the need for a more technical and operative assistance as part of a more comprehensive humanitarian response, goes through having up to date information of the situation.

This is why the first step is a coordinated needs assessment and analysis, with the country's requirements for humanitarian assistance, which the Ministry of Foreign Affairs and International Cooperation of Honduras must communicate to the international community in order to get the assistance needed in an organized way.

Continuous improvement

It is for this reason that the Government of Honduras identified the need to strengthen existing tools, such as the Cooperation Management Platform, and decided to create the Humanitarian Assistance Module as a fundraising tool, where humanitarian assistance is recorded against the communicated needs.

Why a Humanitarian Assistance Module?

- Ensure transparency
- Allow a faster response to humanitarian needs
- Track provided vs needed assistance
- Ensure coordination of humanitarian action
- Have a geographical overview of the situation
